الجريدة الرسمية - العدد ١٧ تابع (د) في ٢٢ أبريل سنة ٢٠٠٤ ١٧

قانون رقم ١٥ لسنة ٢٠٠٤

بتنظيم التوقيع الالكتروني وبإنشاء هيئة تنمية صناعة تكنولوجيا المعلومات

هادة ٢ - تنشأ هيئة عامة تسمى " هيئة تنمية صناعة تكنولوجيا المعلومات " تكون لها الشخصية الاعتبارية العامة وتتبع الوزير المختص ، ويكون مقرها الرئيسى محافظة الجيزة ، ولها إنشاء فروع في جميع أنحاء جمهورية مصر العربية .

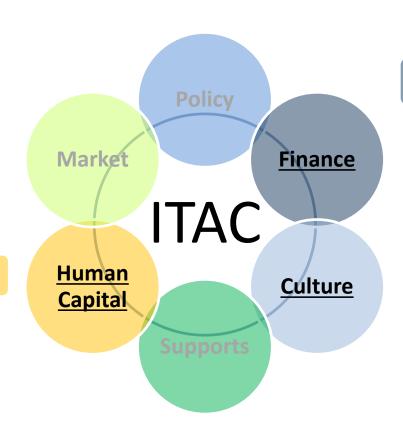

مادة ٣ - تهدف الهيئة إلى تحقيق الأغراض الآتية :

- (أ) تشجيع وتنمية صناعة تكنولوجيا المعلومات والاتصالات .
- (ب) نقل التكنولوجيا المتقدمة للمعلومات وتحقيق الاستفادة منها .
- (ج) زيادة فرص تصدير خدمات الاتصالات وتكنولوجيا المعلومات ومنتجاتها.
- (د) الإسهام في تطوير وتنمية الجهات العاملة في مجال تكنولوجيا المعلومات والاتصالات .
- (ه.) توجيه وتشجيع وتنمية الاستثمار في مجال صناعة تكنولوجيا المعلومات والاتصالات.
 - (و) رعاية المصالح المشتركة لأنشطة تكتولوجيا المعلومات .
- (ز) دعم البحوث والدراسات في مجال تكنولوجيا المعلومات والاتصالات وتشجيع
 الاستفادة بنتائجها .

Programs and Services

Collaborative Funded Projects

- CFPs (National calls): Collaborative fund projects (3 MEGP)

Ghada Yasser Operations specialist

- Not only has ITAC stimulated collaboration between academia and industry but has in many cases led to the development of very successful products on the international level.
- The ITAC program is one of the most flexible and efficient programs supporting innovation, however its scope is limited to ICT industry and the amount of funding is also limited compared to the STDF for example.

United Nations Economic and Social Commission for Western Asia (ESCWA), National Technology Development and Transfer System in Egypt, 2017

The European Commission selected the ESITIP program to be presented in the best practices session in **EXPO-Dubai 2020**.

eCervello: A Prototype for Scalable IoT Systems based on Joint Edge, Fog and Cloud Intelligence

American University in Cairo and IoTBlue

Teams from the American University in Cairo and IoT Blue have collaborated to design and demonstrate a prototype for a novel multi-tier machine-learning model for IoT that spans the edge, fog, and cloud. The developed technology is a key enabler for scalable IoT systems in diverse verticals in Egypt and worldwide, e.g., smart cities, ITS, Industry 4.0, and healthcare. State-of-the-art computing architectures are predominantly single-tier where intensive data processing tasks take place only in the cloud. The eCervello technology hinges on i) a multi-tier system with a joint edge, fog and cloud machine learning (ML) model, ii) Distributed ML model hosting lightweight Logistic Regression at the edge working in concert with more sophisticated Neural Network models at the fog and cloud tiers and iii) a data alignment mechanism to handle asymmetric data from multiple sensors (cameras) for a multi-vehicle tracking use case. "eCervello, supporting edge intelligence, addresses keys problems in state-of-the-art cloud-based loT ML systems, namely limited scalability, large round-trip delays from pushing raw data to the cloud to feeding the decisions back to edge devices, imminent network congestion attributed to loT big "raw" data, lack of data privacy and costly cloud investments/maintenance, to name a few Says Prof. Tamer ElBatt, Professor at AUC in Dept. of Computer Science and Engineering and the principal inves-

As shown, we demo a prototype for a three-tier IoT system using actual hardware and networking technologies. Using the Al City Challenge 2020 public dataset, eCervello demonstrates comparable performance to the centralized ML baseline, yet, with a significant reduction in the training data up to 80% of the whole data set used to train the centralized model

Soft Exoskeleton Glove for hand rehabilitation and assistance with automated assessment features

Ain shams University

Researchers from Ain Shams University introduce an instrumented wearable glove, which is actuated using soft robotics. This glove helps patients with impaired hand motion secondary to weakness as seen in patients with stroke. This glove is designed to enable patients to move their hands and regain control through rehabilitation exercises. In other words, this glove can assist both the patient and the therapist to have more effective rehabilitation sessions. The actuators in this glove are modeled and fabricated based on using silicon rubber to develop mechanically programmable fiber-reinforced actuators. Finite element modeling software and sensitivity analysis of the actuator parameters were used during the design and modeling process to develop an actuator capable to achieve the desired movement and performance. "This developed instrumented system provides force and finger range of motion feedback using force, bending, and pressure sensors. This system can perform set of exercises for rehabilitation like finger bending and pinching and monitor the bending angle and force acting on the finger, which are shown on an LCD display to provide feedback for the therapist and patient' stated Dr. Mohamed Awad — associate professor at Ain Shams University and project principal investigator. In addition, smart objective assessment methods have been developed to assess and evaluate patient performance based on Gradient Boosting, Self-Organizing Maps, and XGBoost. A Supervisory machine-learning algorithm using XGBoost was developed to automatically assess the patients based on Fugl-Meyer's assessment of motor recovery. This automated assessment system can help in automated in-home rehabilitation and assessment especially during COVID-19 as this automated assessment system can be utilized to reduce the number of visits to a physician for assessment.

Mark your calendar for the opening of CFP Round 35! The submission will start on Sep. 3, 2023 and will close by Oct. 31, 2023.

- The deadline varies depending on the CFP type, the deadlines are as follows:
- PRP submission deadline: October 17, 2023 at 3 PM.
- ARP submission deadline: October 24, 2023 at 3 PM.
- PDP submission deadline: October 31, 2023 at 3 PM.
